What Is Web Scraping And Why Data Scraping Tools Became Necessity For Every Successful Business In 2020?

Web Scraping is a common data collection method used by companies to collect data from the Internet without wasting time to do repetitive tasks of copy-paste. Scraper Tools are developed specifically to **extract useful information** from sites. These tools are useful for anyone looking to collect some form of data from the Internet. Web scraping is also known as **web extraction, data extraction**, web harvesting, and so on. But its goals are the same as getting data from the web and storing it in local or cloud storage for further processing or analysis. **2020** is destined to be a year of web scraping. Companies compete against each other with the huge information gathered from many users - whether their consumer behaviors, **content shared on social media** or celebrities they follow. So, you need to build your data assets to be successful.
