## What Is The Best Solution For Every Marketing Team To Create Targeted Leads Data?

One of the most common problems for B2B sales and marketing teams today is to create a B2B lead database, which **gets 100% results**. A database that covers most of your target's potential, ranging from your industry, country, state, city, address, contact details, name, email address, social aids, Skype, and other important information. This is **B2B Leads data** that can be communicated through sales and marketing through **emails, social media, sales visits** and telemarketing. A Leads Database that can grow regularly and can be nurtured to produce results.

When you identify target audiences and web resources where a large amount of target audience data is available and manually capture data, it is important to automate this process with the web scraping tool/software. **Business lead extractor software** is a concept of web scraping. In other words scroll up a web to pull in contacts, names, emails, phones, and other details. Having a [web scraping tool](#) enables regular data collection with very little human involvement, so sales and marketing can focus on the skilled part of their jobs.
